SRI Spin-out Membravo Aims to Transform Hydrogen Separation Technology

Hydrogen is poised to play a critical role in the global energy transition from fossil fuels to renewables, but it's not easy to isolate. Better methods of cost-effectively isolating hydrogen within existing industrial infrastructure are needed.

Can a Microreactor Convert Carbon Dioxide to Methanol Using Renewable Energy?

An innovative project led by SRI promises to transform sustainable fuel production.

Transforming Matter To Create A New Type Of Semiconductor Chip

There are semiconductors that offer attractive electronic properties that silicon does not. For instance, silicon cannot emit light or operate at high

frequencies. Nanofabrication experts at SRI and several leading universities aim to integrate two or more disparate semiconductors.

Robots in the Clean Room

Clean rooms are critical for various types of manufacturing. Traditional methods of managing these environments can be time consuming, labor intensive, and prone to human error.

Parker Solar Probe

SRI imaging technology is supporting a record-shattering NASA mission: On December 18, 2024, NASA's Parker Solar Probe passed closer to the sun than any human-made object in history.

SRI Announcements

Marshall Mohr joins SRI's Board of Directors and Timothy Rogne receives SRI's 2024 Fellows Award for his contributions in electro-optic and infrared sensing.

Recognizing the Life and Work of Mary Wagner

"Her legacy of work has and will continue to improve the lives of students with disabilities for years to come."

The Internet's Top-Level Domains and the SRI NIC

In the late 70s/early 80s, when the growth of the Internet was starting to hamper its usability, several key people were seeking ways to bring more order and comprehension to the issuance of names and addresses for the increasing number of computers joining the network.

In Memoriam

We note the passing of: Michelle Hogan, Thomas F. Horan, Sr., Jean Crane Kenny, Bruce Stein, Frank Charles VonRichter III, Mary Wagner
