Agentic Computing

Adam Cheyer describes how “agentic computing” has become a central focus in discussions about the future of generative AI. While the latest wave of interest in agentic systems may be new to some, SRI International has a deep and pioneering history in exactly this space. This article looks at Agentic Computing of the past and future.

POSEIDON: Screening for Early Cancer Detection

The Advanced Research Projects Agency for Health (ARPA-H) has awarded up to \$34 million to SRI and partners Foothold Labs, Triple Ring Technologies, and Beacon Dx Health to develop technology as part of the [POSEIDON](#) (Platform Optimizing SynBio for Early Intervention and Detection in Oncology) program.

Managing Sleep and Screen Time

An SRI team has developed a highly concentrated naloxone formulation that provides a rapid and sustained reversal of opioid overdose. The SRI formulation delivers 10 times more naloxone per milliliter than current marketed products and is optimized for systemic availability and shelf stability.

Where are They Now?

Craig Heinselman was recently awarded the Beynon Medal by the European Incoherent Scatter Scientific Association, which he led after leaving SRI to join the University of Alaska Fairbanks Geophysical Institute as a research professor. Craig received the honor for his work leading a six-nation organization that builds and operates ionospheric research facilities in northern FennoScandinavia.

Congressman Gerry Connolly Dies

Gerry Connolly, SRI alumni and distinguished U.S. Congressman, died in May while in office and as ranking member of the House Oversight Committee. Don Nielson summarizes his accomplishments.

In Memoriam

We note the passing of: Edward Acton, Richard Adamo, Gerald Connolly, Earl Craighill, Oscar Firschein, Edward Jones, Thomas Logotheiti, David Walker, Melvin Wright

Robot Teams that Chat with Humans

Development of next-generation AI systems to interact with humans and language models (LLMs) for various applications. It's going to change how we work with machines."
